

# LEDLEASE

**Immediate cost & energy savings**

**No investments**

**Zero risk**

[www.ledlease.com](http://www.ledlease.com)

**LED Lease** finances the switch to LED for 'heavy users' of lighting such as hotels, schools, factories and office buildings. Switching to LED immediately decreases energy consumption. This saves costs, reduces CO<sub>2</sub> emission and benefits our environment.

- ⌚ Save money and CO<sub>2</sub> immediately
- ⌚ No investments, pay LEDs from your cost savings
- ⌚ Risk-free; product quality is guaranteed by LED Lease

---

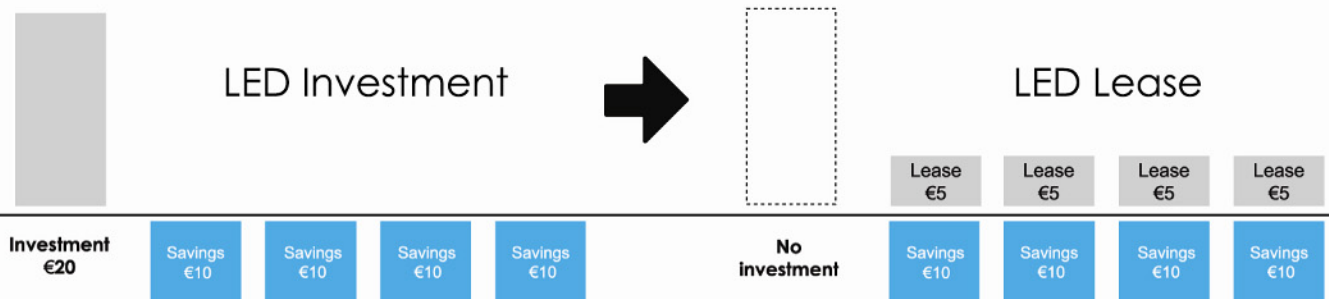

LED Lease offers rent and hire-to-purchase retrofit LED lights for the professional market. We source the best quality LED lights directly from multiple suppliers. We compare LED lights and advise our customers on suitable lighting options for their business space.

# The LED Lease concept

Despite the obvious advantages, professional end users hesitate to invest in LED applications. The quality of LED products varies widely, investments are high, and long lifetimes of 35,000 hours and beyond can not always be substantiated.

LED Lease addresses these concerns. We offer only the best quality LED retrofit lamps – tube lights, bulbs, down lights, spot lights – and we guarantee the long lifetime of these products in a hire-to-purchase contract. We replace LED lamps should they fail, at no cost. After the hire period of 3 to 5 years, you own the lamps at no expense and you enjoy 100% of the cost savings.

**You only pay as long as LED Lease provides the agreed service levels.  
All warranties and guarantees of suppliers are fulfilled by LED Lease.**

The hire-to-purchase improves your cash flows

## Lowest cost of lighting

LED Lease offers the financial benefits of a hire-to-purchase contract: you optimize your cash flows by paying off the investment over time. For most professional users this will immediately reduce their total cost of lighting by approximately 50%. LED Lease is able to offer you the most competitive prices. We source lights in bulk, directly from the best manufacturers.

# The LED Lease concept

We buy from the 'big brands' as well as lesser-known suppliers of professional quality products and components. We also maintain direct relationships with component suppliers such as Cree and Osram, to ensure best-in-class performance and negotiate pricing on our customers' behalf.

We offer only high-quality LED lamps. They are mostly plug-and-play lamps suitable for replacement of traditional incandescent, halogen and fluorescent lights. The LED lamps are more efficient, last much longer, generate less heat, and contain no mercury.

# The LED Lease concept

LED Lease only finances LED lamps whose safety, quality and lifetime we can assess. We check compliance with all the necessary safety and environmental standards. These certifications differ between countries and continents. All lamps are KEMA CE certified and RoHS compliant.

# The LED Lease approach

1. We calculate your savings on-site with you

2. You choose your LED alternative

3. You receive your savings assessment

## Calculate LED savings

### 1 Calculate your potential savings

We assess your current installed base of lamps with you and calculate your current lighting costs. LED Lease will analyze this input to make a detailed calculation of your savings from switching to LED. Your CO<sub>2</sub> and cost savings are based on usage hours, electricity prices, and the types of lamps you are replacing.

For an initial estimate, a user-friendly savings calculator is available on our website [ledlease.com](http://ledlease.com).

## **2 Choose your LED alternative**

LED Lease will suggest a variety of LED alternatives from different suppliers. We use objective and quantitative data to assess the latest LED retrofit products on output, colour temperature, colour rendering, efficacy and dimmability. Using the 'compare' tool on our website, you can assess the best available LED products. LED Lease can further advise you on the most suitable lamps for your business space.

## **3 Receive a quote & savings assessment**

LED Lease prepares a proposal for lamps, based on the inventory of your business and your preferred LED alternatives. We present you with a transparent overview of your current cost of lighting versus your savings potential, including the cost of lease. Together we can decide on the lease period and instalment options.
